

A deterministic model trained with MSE learns the average of possible futures

possible future 1

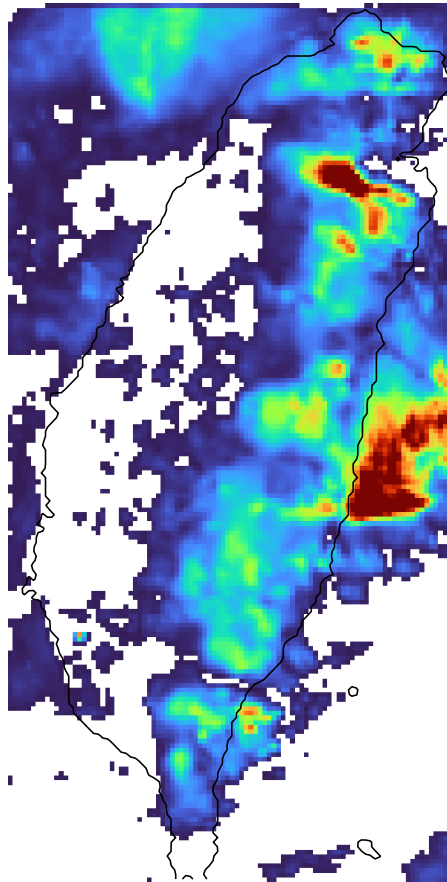

max 93 mm/h

possible future 2

max 77 mm/h

possible future 3

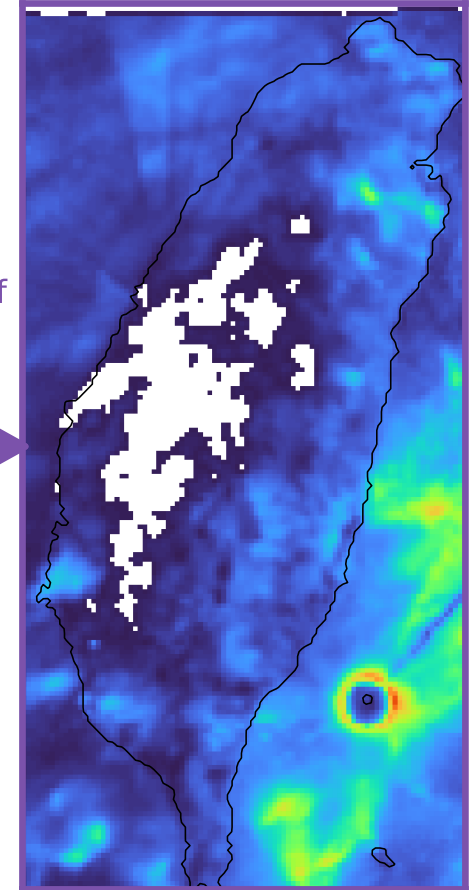

max 77 mm/h

mean of
all 8

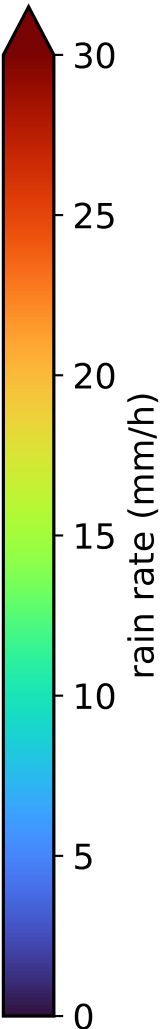

(5 not
shown)

their average —
what MSE training learns

max 25 mm/h

“possible futures” = 8 observed heavy-rain hours from the 2022 validation year (illustration — not a true forecast ensemble)
